

SOLO AUTOMA - COMPONENT AND RULES OVERVIEW

COMPONENTS	GAMEPLAY CHANGES cont.
- 17 Automa Round Cards - 1 Automa Scoring Reference Card - 1 Window pattern card	9 cont. - If there is not a die in the round track spot it wants you will move to the next number on the card and select that die instead. If needed, look at the 3rd or 4th number from the left to find a die that is there on the round track.
SETUP	10. In the event there is a die at the round track spot it wants but taking it would give the automa their 5th die of that color do not take it, instead look at the die immediately above that die on the round track and take one of those instead if there is a spot for it on its window frame. Once the swap has occurred move the original dice up above the round track to replace the die taken. If the automa still can't use the dice above the spot it wants it forfeits that turn's draft and will either finish the round if that was its second draft that turn or will move to the right on its automa card to select its next die on an upcoming die draft that turn.
1. Setup the game per the normal two player rules. 2. For the automa take an empty window frame and slide the automa window pattern into it. 3. Shuffle the 17 automa round cards and select 10 at random to use, return the remaining 7 cards to the box as they are not needed for this game. 4. Place 5 favor tokens, as noted on the automa window pattern card, near the automa play area. I like to place them on its window frame. 5. Deal the automa a secret objective without looking at it. 6. For a visual teaching please visit my youtube channel "Carolina Gamer" or search on youtube for "Sagrada Solo Automa - Components and Setup."	
GAMEPLAY CHANGES	10 cont - I tried to word that the best way I could. For a visual teaching visit my youtube channel "Carolina Gamer" or search youtube for "Sagrada Solo Automa / How to Play." I go over this exact scenario.
1. Gameplay plays the same as the multiplayer except for the following changes: 2. The round tracker will still be used but we will need to use slots 1-5 every round so at the end of the round when the last die is left do not place it in the numbered area, place it above at the top of the round track over the corresponding round number. 3. The tools cards are numbered 1-3 from left to right for interaction with the automa deck (i.e. the far left tool card is number 1, middle is number 2, and far right tool card is number 3). 5. At the beginning of each round grab 5 dice from the bag at random, roll them, and place them on the round track spaces 1-5 (one die per spot.) 6. At the beginning of every odd round you, the player, will go first by selecting one die from the 5. Then you will flip over an automa card and the automa will select two dice based off the automa card moving from left to right. Lastly you will finish the round by selecting your second die and then will place the remaining dice above the round tracker for the round you are in. 7. At the beginning of every even round the automa will go first by flipping over an automa card and selecting a die based on the automa card. You, the player, will then select two dice and the automa will finish selecting its second die followed by putting the remaining dice above the appropriate round tracker spot. 8. The Automa cards have two sections to them. One section gives you four corresponding round tracker spots and the bottom section will either have nothing, will tell you to place favor tokens from the automa's supply onto a tool card, or will let the automa take an additional immediate turn. 9. When it is the automa's turn and a card is flipped you will read the corresponding round track dice that it wants from left to right. If the first number is 5 you will look at the dice in the 5 spot and if there is a die there you will select it and place it on the automa's window pattern matching the color of the dice. You will place from top to bottom on the window pattern and the numbers do not matter until end of game scoring.	11. Additionally, on the automa card there could be a tool graphic. If there is you will place one or more favor tokens on the appropriate tool card following the normal rules. Please note the automa never takes the action on the tool card, it simply places favor tokens on them. If two favor tokens are required on a tool card because it had already been used in the game and the automa only has one favor token it will ignore that part of the card for this turn and keep the favor token. 12. There is one card in the automa deck that lets the automa immediately draft its second die. 13. Gameplay continues until all ten rounds have been played and then scoring ensues.
	<th data-bbox="808 1283 1578 1312">END OF GAME AUTOMA SCORING</th>
	1. Scoring for you the player does not change. Score per normal. 2. When ready to score for the automa grab the automa scoring card reference and work from top down to avoid missing any scoring. 3. The automa will score based off of COMPLETED columns and rows as well as if it completely filled in its window pattern, unused favor tokens, their secret objective, and negative points for any empty spaces. 4. For column scoring go column by column and count the number of pairs of numbers in each column. Do the same for 3 of a kind, 4 of a kind, and any columns that have non repeating numbers. Score each of those based off the points on the reference card. As an example when counted if the automa had 4 pairs it would get 16 points (4 points each). Four matching numbers in a column counts as 4 of a kind, not two pairs. Repeat the same step for the rows. If the automa completely filled in its window pattern it gets an additional 5 points. The automa gets -1 point per empty square, +1 point for any unused favor tokens, and it scores its secret objective just like you would. Ties are broken by most points from Private Objectives then most remaining Favor Tokens, and then the automa wins if there is still a tie.
	5. For a visual teaching on how to score visit my youtube channel "Carolina Gamer" or search youtube for "Sagrada Solo Automa - Scoring." I go over this in detail. Stay tuned as I will have a full playthrough on my channel soon.

PASSIONS EXPANSION SOLO AUTOMA - COMPONENT AND RULES OVERVIEW

COMPONENTS	GAMEPLAY CHANGES cont.
- 3 Automa Round Cards - 6 Glass Bead Location Cards	3. In the event that placing the glass bead die in a color column would give that column its 5th die. Remove the colored die from the board and place it in the bag instead of moving it down the column.
SETUP	
1. Shuffle the glass bead boards and add 1 to the tool track. The tool track slot doesn't matter and I like to change it up to randomize the gameplay. 2. Shuffle the 3 new automa cards and add 1 of them to 9 of the normal automa cards to make your 10 card automa deck for the game. 3. Shuffle the 6 glass bead location cards and place them near the game area to be used later. 4. For a visual teaching please visit my youtube channel "Carolina Gamer" or search on youtube for "Sagrada Solo Automa - Passions Expansion."	4. With the Passions expansion you only play with two tool cards. In the event that an automa card references a tool card slot where the glass bead board is sitting, you simply ignore that graphic and the AI doesn't place any favor tokens on tool cards that turn. 5. If you are like me and like to combine all the private objectives and pick one randomly for the AI there is a chance that the AI might have a private objective based having a glass bead but it does not have a glass bead on its board. To remedy that you can do one of the following options.
GAMEPLAY CHANGES	
1. Once setup play is the same as the normal automa rules until you draw an automa card interacting with a glass bead board. 2. After it has drafted its first AI dice it will interact with the glass bead board. If the AI has favor tokens remaining it will place two of them on the glass bead board and will place it on its board (If the AI has 0 or 1 favor token left it will put as many of them on the glass bead board as it has, including zero, and will still take a glass bead dice. Where it places the dice is determined by the 6 card glass bead location deck. Flip the top card over and place the glass bead at that location. If there is already a die at that location on your window frame then move that existing die down the column on the pattern card and place the glass bead die according to the glass bead location deck	5A. Remove automa card AIP-2 before shuffling one of the expansion automa cards into the automa deck to ensure that the automa interacts with a glass bead board. 5B. In the event you get to end game scoring and the AI has a glass bead private objective but doesn't have a glass bead on its board simply take the glass bead currently showing on the glass bead board and place it on the automa's window frame according to a glass bead location card. Simply remove the existing die, return it to the game bag, and insert the glass bead die with the same shade value (number) of the die you removed. Then score its private objective as normal.
	5B is my preferred way to play due to replayability .
	INSPIRATION MODULE
	You may choose to play with an inspiration card if you feel that the game is too difficult but the AI will not play with one.
IN THE EVENT THAT AN AUTOMA CARD MAKES THE AI INTERACT WITH A GLASS BEAD BOARD, THE AI WILL ALWAYS TAKE THE DIE ON THE FAR LEFT ON THE GLASS BEAD BOARD.
